

# ACCELERATOR SEMINAR

## “Insertion Devices at the Argonne Advanced Photon Source, and Some Elsewhere”

*Elizabeth Moog,  
Argonne National Laboratory*

As a part of the upcoming upgrade to the Advanced Photon Sources, a variety of new insertion devices is planned, including revolvers and a pair of new quasi-periodic, all-electromagnetic, variably-polarizing undulators. We are also continuing our development of a superconducting undulator, with the intention of installing the first prototype undulator in the spring of 2012. These new IDs will be discussed. In addition, there will be some discussion of new IDs at other light sources, such as cryogenic permanent magnet undulators.

**Thursday, April 7, 2011  
11:00 a.m.  
CEBAF Center, Room F113**

**Coffee before seminar beginning at 10:45 a.m.**
